Satellite radio provides instant traffic and weather access to places across the country. Unlike FM or AM stations, satellite radio allows the listener to not have to listen for 30 minutes or flip all over the radio trying to find the most up-to-date information. Several times, I have been stuck in traffic or jolted by sudden weather changes that my local stations were not quick enough to notify me on. Satellite radio is 100% more beneficial in that area. PLEASE REJECT the NAB's PETITION 04-160 and allow satellite servers to provide the information. It is paid for by the consumer, unlike AM and FM stations.
